How to build your Artificial Portable Hedge

Thank you for buying your Designer Plants Artificial Hedge. Now it's time to put it together

Step 1. Unbox your Artificial hedge and place each face of the hedge lying face down as shown. Take note of the numbers and/or arrows on the inside face (shown in red circle). This indicates the top and bottom of the hedge.

Step 2. Place each pole into each of the empty holes on one face of the hedge as shown in the image. Then use a rubber mallet or similar tool to ensure the poles are firmly in. **(This step is really important).**

Step 3. Connect the 2nd face of the hedge to the face with the poles already connected, as shown in the image. Make sure that all of the poles are in both holes on either face before pressing each side together firmly.

Step 4. Firmly push each side of the hedge together so that the poles are in firmly. Then use the rubber mallet lightly on the top of each connection point to ensure that the poles are in firmly. **Do not** forget this step, otherwise the hedge will not connect properly.

Step 5. Read Step 5 and 6 together before commencing Step 5. Connect the loose hedge pieces by lining up the holes and lugs in each corner. For bigger size hedges, please note the numbers and/or arrows on the loose pieces indicating whether these are a top or a side piece.

Please turn over for further instructions

Step 6. When connecting the loose hedge pieces, connect the hedge using the lugs in a diagonal manner - to allow for enough stretch in the panel and easier connecting. Connect in order of numbers in the above picture. **Do not** connect the ones adjacent to each other.

TIP: If placing inside a planter, allow at least 0.9" or 2.2cm extra around all sides to allow for the foliage.

Step 7. Enjoy your completed Artificial Hedge!
